

Ubisense Smallworld Pedigree

With 40 consultants dedicated to the Smallworld technology suite in North America & Europe, Ubisense has one of the leading Smallworld delivery teams.

Our consultants each have between five and fifteen years of experience with the Smallworld product suite across a broad range of industries and applications, as well as direct involvement on Smallworld product development teams including Core Spatial Technology, PowerOn, Design Manager, PNI and Cornerstone.

Smallworld™ GIS Best Practice Review

How the Best Practice Review Works

We begin with an overall application review and compare your applications with best practices. This review covers high level implementation issues, as well as application functionality and processes related to use of the technology.

Upgradeability review

The way that your applications are implemented is a major factor in how easy or difficult upgrades are. We review a variety of factors, such as whether you have custom functionality or third party applications. We then recommend strategies for reducing the cost of future upgrades.

Web strategy

Enabling access to your GIS via the web is often one of the areas that provides the biggest return on investment. We review your existing system and make recommendations on improvements that would lead to better performance.

Integration strategy

Integrating your GIS with other major business systems can provide many financial benefits. New technologies such as XML and web services make integration easier than ever. We will review your integration strategy in the light of industry best practices and make recommendations as to the most effective strategy for your business.

Mobile Spatial Solutions

We review your existing or planned field applications and make recommendations on the various options. Ubisense brings experience with a wide variety of solutions for moving data to the mobile workforce. We will evaluate existing investments and capabilities with your staff and recommend options.

Data integrity / Security

Your data is probably the biggest single investment you have made within your GIS project. Many organizations do not do all they should to ensure the security and integrity of that data. We can complete a review of the related strategy and processes, and suggest improvements.

What we do

Are you getting the maximum benefits from your Smallworld™ GIS investment?

Making small changes in the way that you are using the system or your system configuration can provide significantly improved benefits to your organization. There may be new application areas or integration possibilities that can further leverage your existing investment.

The Ubisense Best Practice Review leverages our unparalleled Smallworld experience to help you determine short and long term strategies for your GIS project.

The review is typically carried out by two of our senior consultants to provide multiple perspectives and maximize the value you receive from the review.

The Best Practice Review team meets with your organization's management to discuss expectations and satisfaction with your Smallworld GIS implementation.

We work with end users and IT staff to understand how you are currently working with the system and what difficulties exist that prevent you from receiving maximum benefits. We review your source code, data model and database architecture to identify potential performance and data integrity issues.

Then we present a report summarizing our findings and recommendations.

About Ubisense

Ubisense is the world leader in Precise Real Time Location Systems, tracking unlimited numbers of people and objects in any space of any size. With unmatched 15cm 3D tracking accuracy and high reliability, its acclaimed open standards technology platform gives enterprises the power to bring visibility and control to previously intractable business processes. Together Ubisense consulting and its partners, such as IBM, Atlas Copco, Lockheed Martin and Raytheon deliver geospatial and RTLS systems, pioneering innovation whilst reducing costs, gaining competitive advantage and improving safety for companies across all vertical markets. With over 400 customers worldwide including BMW, Caterpillar, DHL, Duke Energy, Deutsche Telekom, US Army; Ubisense is revolutionising industries today. Visit www.ubisense.net
